

Soren Haynes

(509) 881-1986 | SorenHaynes@hotmail.com | [Linkedin](#) | Phoenix, AZ

SUMMARY

Driven Computer Science student with a focus on Big Data and AI applications. Experienced in backend development, data management, and software automation using Java, Python, and MongoDB.

Demonstrates strong problem-solving, adaptability, and collaboration skills in professional and academic environments. Passionate about building efficient, data-driven software solutions.

SKILLS

Java | Python | C | Shell Scripting | MongoDB | PostgreSQL | C# | Data Analysis | Testing | Documentation | Project Management | Communication and Leadership

EDUCATION

Bachelor of Science in Computer Science – Big Data

Grand Canyon University, Phoenix, AZ

(Expected Graduation: Spring 2026)

PROFESSIONAL EXPERIENCE

Software Engineering Extern

September 2025 – Present

Paychex — Remote, AZ

- Completed required technical and compliance training for software development.
- Set up and configured development tools (Gradle, Spring Boot, SourceTree).
- Assisted in setting up OAuth-based applications and backend integrations.
- Collaborated in Agile sprints using Jira and Confluence for task tracking and documentation.
- Gaining hands-on experience in enterprise-level development workflows.

PROJECTS

AI-Powered Vulnerability Remediation System (Capstone)

- Designed and developed an automated vulnerability remediation system that ingests Checkmarx One scan results and persists enriched reports to MongoDB
- Integrated with Bitbucket APIs and OAuth-based authentication to validate dependencies against official registries and generate remediation pull requests
- Demonstrated ability to follow defined enterprise workflows, document processes, and work within security-focused constraints
- Built using Java, Python, MongoDB, and enterprise integration patterns

Full-Stack AI Showcase Website

- Designed and deployed a full-stack web application showcasing multiple AI models I trained; including image recognition, generation, and sentiment analysis
- Built responsive frontend and deployed to Vercel for production access
- Developed backend services running on Ubuntu server to integrate multiple AI APIs

VOLUNTEER WORK

CCSC Volunteer — On and Off Campus

- Supported community and campus events involving technology education and outreach.
- Assisted in coordination and setup for student-led technical projects and competitions.
